Anigran is a gel with a high content of hyaluronic acid (1.5%) indicated for healing chronic and acute wounds.

Optimal content of iodine complex in the product (0.25%) protects hyaluronic acid from degradation by bacterial enzymes, while eliminating risk of developing an infection.

Anigran effectively supports granulation, tissue epithelisation, and reduces possible development of hypergranulation. The hyaluronic acid content means that Anigran reduces total duration of therapy and lowers lesion rates.

**INDICATION OF ANIGRAN**
- Chronic, non-resolving wounds
- Deep wounds, cavities, fistulae
- Acute, traumatic wounds
- Bruising
- Lacerations, bites
- Post-operative dehiscence
- Poorly resolving sutures
- Large abrasions
- Infected wounds

**FREQUENCY OF DRESSING CHANGE**
- 24 - 72 hours

Frequency of dressing change depends on presence of an infection in the wound. Infected or strongly exuding wounds should be re-dressed every day.

**DOSing**

INSTRUCTIONS FOR USE

Put on gloves and clean the wound prior to application of Anigran. Tear off the cap and puncture the rubber stopper using the spike. Turn Anigran upside down and prime an injection syringe with required amount of the gel.

According to the type of wound, apply the gel directly into the wound or soak a piece of gauze with the gel. The gauze is sufficiently soaked when a small amount of the gel is forced out by pressing the gauze inbetween your fingers.

Apply the prepared dressing over the wound surface and cover it with an appropriate secondary dressing according to the exudation grade. Successful treatment requires sufficient amount of the gel to be applied to provide a wet environment within the wound. Do not pull the spike out from the stopper after application and store Anigran in a refrigerator. Prior to the next application, let the gel adjust to room temperature.

APPLICATION BY TYPE OF WOUND

SURFACE WOUND
Apply Anigran onto the wound using a non-woven cloth or sterile gauze and cover it with a secondary dressing.

NARROW FISTULA
Apply Anigran directly into small cavities and fistulae using an injection syringe.

CAVITY
Use a piece of gauze soaked with Anigran as a drain to fill up the cavity.

AWKWARD LOCATION FOR APPLICATION
For easier application to a place where the Anigran soaked gauze is difficult to apply, Omnifix® elastic.
